## PREPARED BY

**KERRY KRELL, MPH, MCHES**  
**ORAL HEALTH PROGRAM MANAGER**

**OCTAVIA TOOMBS, MPH**  
**ORAL HEALTH EPIDEMIOLOGIST**

**RACHEL SIZEMORE, DDS, MHSA**  
**DIRECTOR, OFFICE OF ORAL HEALTH**

## REVIEWED BY

**CYNTHIA ARREOLA**  
**ORAL HEALTH PROGRAM COORDINATOR**

**BRANDY SUTPHIN**  
**CHRONIC DISEASE EPIDEMIOLOGY SUPERVISOR**

**SCIENCE ADVISORY COMMITTEE**

# PURPOSE

The purpose of the Oral Health Data Deck is to provide a set of graphs and charts that tell the story of oral health practices and oral disease risk factors in Arkansas.

These charts and graphs can freely be copied for use in other presentations or reports.

## What is Oral Health?

Oral health involves the proper function of tissues in the oral cavity like:

- Teeth
- Gums
- Hard and soft palate
- Lining of the mouth and throat
- Tongue
- Lips
- Salivary glands
- Chewing muscles
- Upper and lower jaw bones

## What is Oral Disease?

Oral diseases develop when bacteria, viruses, and other influencing factors cause tissues of the oral cavity to stop functioning properly or break down.

Oral diseases can include tooth decay (cavities), gum disease (periodontal disease), and oral cancers.

Other conditions that can impact oral health include oro-facial birth defects and chronic diseases like diabetes.

## Why is Oral Health Important?

Good oral health allows people to chew nutritious foods, form the sounds of speech, and smile at people around them.

Oral disease is caused by bacteria that can enter the bloodstream and complicate diseases in other places in the body. Preventing and treating oral disease can make the whole body healthier.

# DATA SOURCES FOR THE 2024 DATA DECK

## NATIONAL LEVEL DATA

### **Behavioral Risk Factor Surveillance System (BRFSS)**

The Behavioral Risk Factor Surveillance System is a standardized, random telephone health survey conducted by each of the 50 states, Washington, D.C., and three U.S. territories under the guidance of the Centers for Disease Control and Prevention (CDC). Arkansas BRFSS contracts with an outside agency to conduct the survey, using a Computer-Aided Telephone Interviewing System. Respondents are selected using a “Disproportionate Stratified Random Sampling” design using a two-stage process. First, a telephone number is randomly selected from listed and unlisted telephone numbers. Second, according to BRFSS protocol, when a residence is selected, a random household member (age 18 or older) is chosen to interview. The surveillance system consists of self-reported data, and oral health questions are asked every even year.

### **Youth Risk Behavior Surveillance System (YRBSS)**

The CDC’s Youth Risk Behavior Surveillance System is the only surveillance system designed to monitor a wide range of priority health risk behaviors – unintentional injuries and violence; tobacco, alcohol, and other drug use; sexual behaviors that contribute to unintended pregnancy and sexually transmitted diseases, including HIV infection; unhealthy dietary behaviors; physical inactivity; obesity; and asthma – among high school students. YRBSS uses a stratified random sample of schools and students at both the national and state levels. It is a paper-based classroom survey. The surveillance system consists of self-reported data, and oral health questions are asked every odd year

## STATE LEVEL DATA

### **Arkansas Cancer Registry Query System**

The Arkansas Cancer Registry Query System is a population-based registry with the goal of collecting timely and complete data on all cancer cases diagnosed in the state. The registry, located within the Center for Public Health Practice of the Arkansas Department of Health, is responsible for maintaining a statewide cancer incidence reporting system; monitoring data accuracy, reliability, and completeness through systematic quality assurance procedures; analyzing cancer incidence and mortality data; disseminating cancer information; and facilitating studies related to cancer prevention and control.

# DATA SOURCES FOR THE 2024 DATA DECK

## STATE LEVEL DATA, cont.

### **Child Core Set (Medicaid Children's Health Insurance Program)**

The Children's Health Insurance Program Reauthorization Act of 2009 (CHIPRA) included provisions to strengthen the quality of care provided to and health outcomes of children in Medicaid and the Children's Health Insurance Program (CHIP), leading to the establishment of the Child Core Set. The Child Core Set includes a range of children's quality measures encompassing both physical and mental health. The data for the Child Core Set are reported by a state's Medicaid program annually.

### **Pregnancy Risk Assessment Monitoring System (PRAMS)**

The Pregnancy Risk Assessment Monitoring System is a surveillance project of the CDC and state health departments. PRAMS collects state-specific, population-based data on maternal attitudes and experiences before, during, and shortly after pregnancy. PRAMS provides data for state health officials to use to improve the health of mothers and infants. PRAMS allows CDC and the states to monitor changes in maternal and child health indicators (e.g., unintended pregnancy, prenatal care, breastfeeding, smoking, drinking, and infant health). PRAMS enhances information from birth certificates used to plan and review state maternal and infant health programs. The PRAMS sample is chosen from all women who had a live birth recently. Weighting methodology is applied for the findings to be representative of the state's entire population of women who have recently delivered a live-born infant. PRAMS not only provides state-specific data but also allows comparisons among participating states because the same data collection methods are used in all states.

### **Dental Health Professionals in Arkansas**

The Health Statistics Branch of the Arkansas Department of Health provides a variety of data concerning the health of Arkansans, including a Health Professions Manpower Statistics report. This report is based on information obtained by the Arkansas State Board of Dental Examiners (ASBDE) during the 2020 license renewal process.

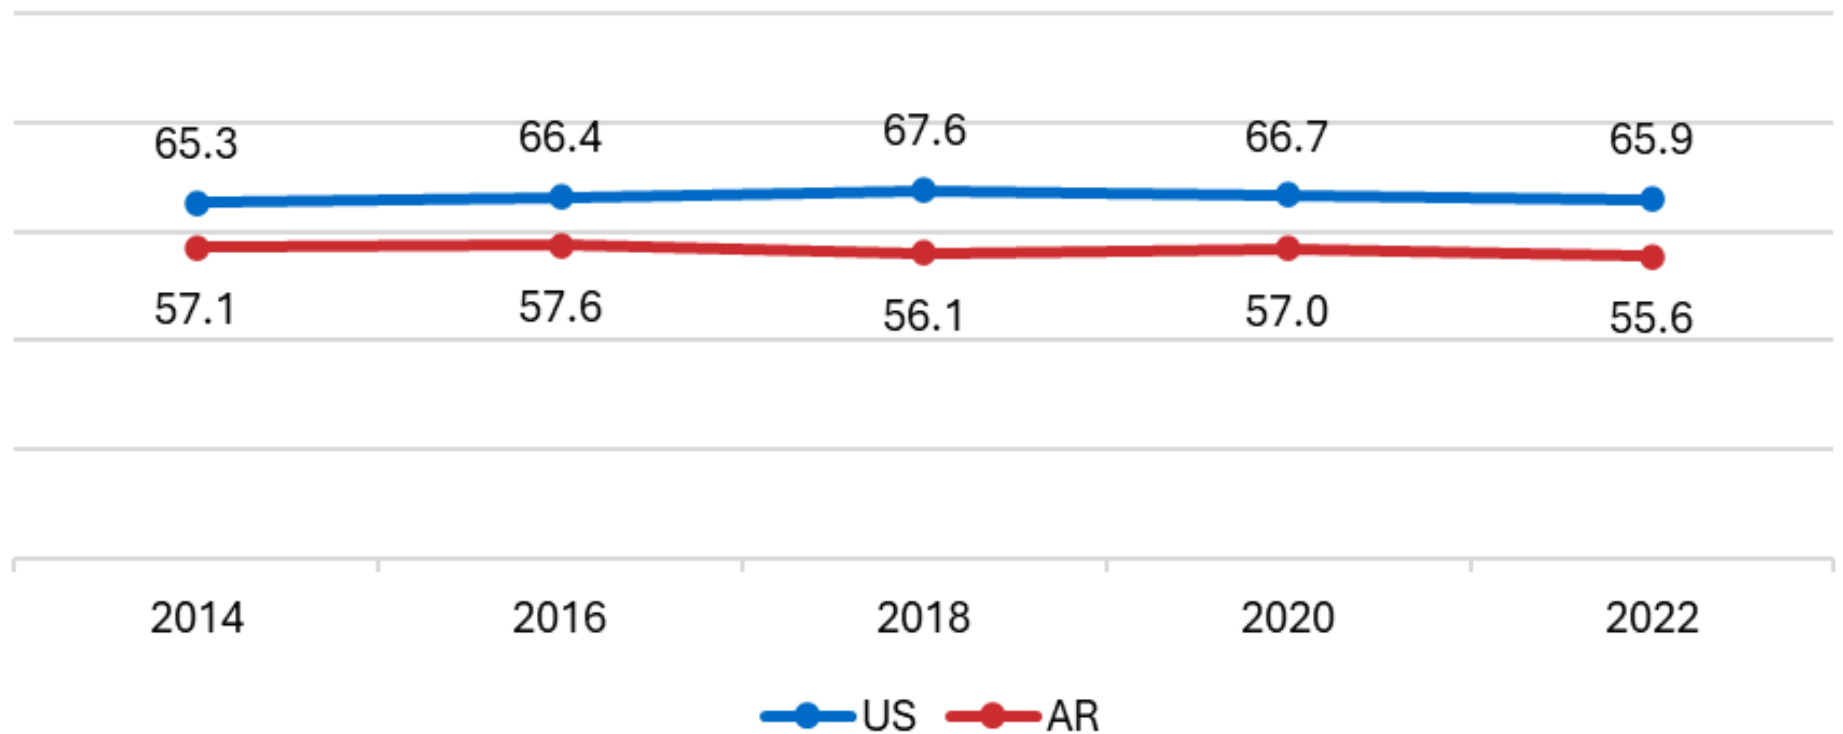

Copies of practitioner responses to questions on license and permit renewal applications were provided to the Arkansas Department of Health (ADH) Health Statistics Branch by the ASBDE. Because the data were collected by several boards using questionnaires designed to meet the licensing requirements of the individual professions, a certain consistency of format and content - desirable for manpower measurement - is missing from the data. Various items of demographic data, such as ethnic origin and gender, are obtained by some, but not all, of the boards. Information relating to a practitioner's location- address, city, county, state, etc.- meets the licensing board's need to communicate with the practitioner by mail and may or may not identify the site(s) where health-related services are performed.

# BEHAVIORAL RISK FACTOR SURVEILLANCE SYSTEM

## DENTAL VISITS

Regular dental visits are key to diagnosing, preventing, and treating oral diseases.

Percent of Adults that Visited the Dentist or Dental Clinic within the Past Year, United States and Arkansas, 2014 – 2022

# BEHAVIORAL RISK FACTOR SURVEILLANCE SYSTEM

## DENTAL VISITS BY GENDER & AGE

Regular dental visits are important for both women and men as each may experience different oral disease risk factors.

Percent of Adults that Visited the Dentist or Dental Clinic within the Past Year by Gender, Arkansas, 2020 - 2022

# BEHAVIORAL RISK FACTOR SURVEILLANCE SYSTEM

## DENTAL VISITS BY AGE

Regular dental visits across the lifespan can help ensure a lifetime of good oral health.

Percent of Adults that Visited the Dentist or Dental Clinic within the Past Year by Age Group, Arkansas, 2020 - 2022

# BEHAVIORAL RISK FACTOR SURVEILLANCE SYSTEM

## DENTAL VISITS BY RACE/ETHNICITY & INCOME

Percent of Adults that Visited the Dentist or Dental Clinic within the Past Year by Race/Ethnicity, Arkansas, 2020 - 2022

Increased household income correlates to a greater likelihood of visiting a dentist within the past year. These data indicate that accessing dental care is more difficult for individuals with lower household incomes. <sup>1</sup>

Percent of Adults that Visited the Dentist or Dental Clinic within the Past Year by Household Income, Arkansas, 2022

# BEHAVIORAL RISK FACTOR SURVEILLANCE SYSTEM

## TOOTH LOSS

Edentulism, or having no natural teeth, can impact physical and social well-being. <sup>2</sup>

Percent of Adults Aged 65+ with No Natural Teeth Present,  
United States and Arkansas, 2014 – 2022

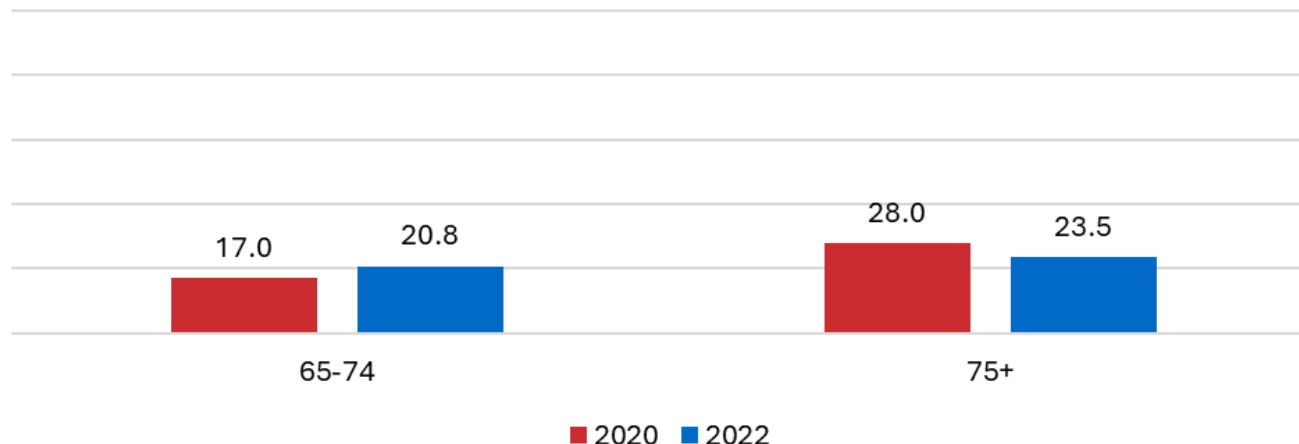

# BEHAVIORAL RISK FACTOR SURVEILLANCE SYSTEM

## TOOTH LOSS BY GENDER & AGE

Percent of Adults Aged 65+ with No Natural Teeth Present by Gender, Arkansas, 2020 - 2022

Percent of Adults Aged 65+ with No Natural Teeth Present, by Age Group, Arkansas, 2020 - 2022

Regular dental care and daily oral hygiene throughout the lifespan increases the likelihood of retaining natural teeth as an individual ages. Edentulism among older adults can contribute to nutritional deficiencies, difficulty managing chronic conditions, and speech problems.<sup>2</sup>

# BEHAVIORAL RISK FACTOR SURVEILLANCE SYSTEM

## TOOTH LOSS BY RACE/ETHNICITY & INCOME

Percent of Adults Aged 65+ with No Natural Teeth Present, by Race/Ethnicity, Arkansas, 2020 - 2022

Increased household income correlates to a greater likelihood of maintaining natural teeth. Without regular dental care, oral disease can advance to a degree where extraction is the only option for treatment. These data indicate that individuals with lower household income are more likely to not have their natural teeth, which may be related to financial barriers of accessing regular dental care.

Percent of Adults Aged 65+ with No Natural Teeth Present, by Household Income, Arkansas, 2022

# YOUTH RISK BEHAVIOR SURVEILLANCE SYSTEM

## DENTAL VISITS AMONG YOUTH

Adolescence brings physical and behavioral changes that can impact oral health. National data show that more than half of adolescents have had a cavity in at least one of their adult (permanent) teeth.

Percent of High School Students that Visited a Dentist  
within the Past Year, United States and Arkansas,  
2019 – 2023

# YOUTH RISK BEHAVIOR SURVEILLANCE SYSTEM

## DENTAL VISITS BY GENDER & RACE

Percent of High School Students that Visited a Dentist within the Past Year by Gender, Arkansas, 2019 - 2023

Percent of High School Students that Visited a Dentist within the Past Year by Race/Ethnicity, Arkansas, 2019 - 2023

# ARKANSAS 3<sup>RD</sup> GRADE BASIC SCREENING SURVEY

## KEY ORAL HEALTH INDICATORS

Percent of Select Oral Health Indicators Among Arkansas  
3rd Graders, 2010-2023

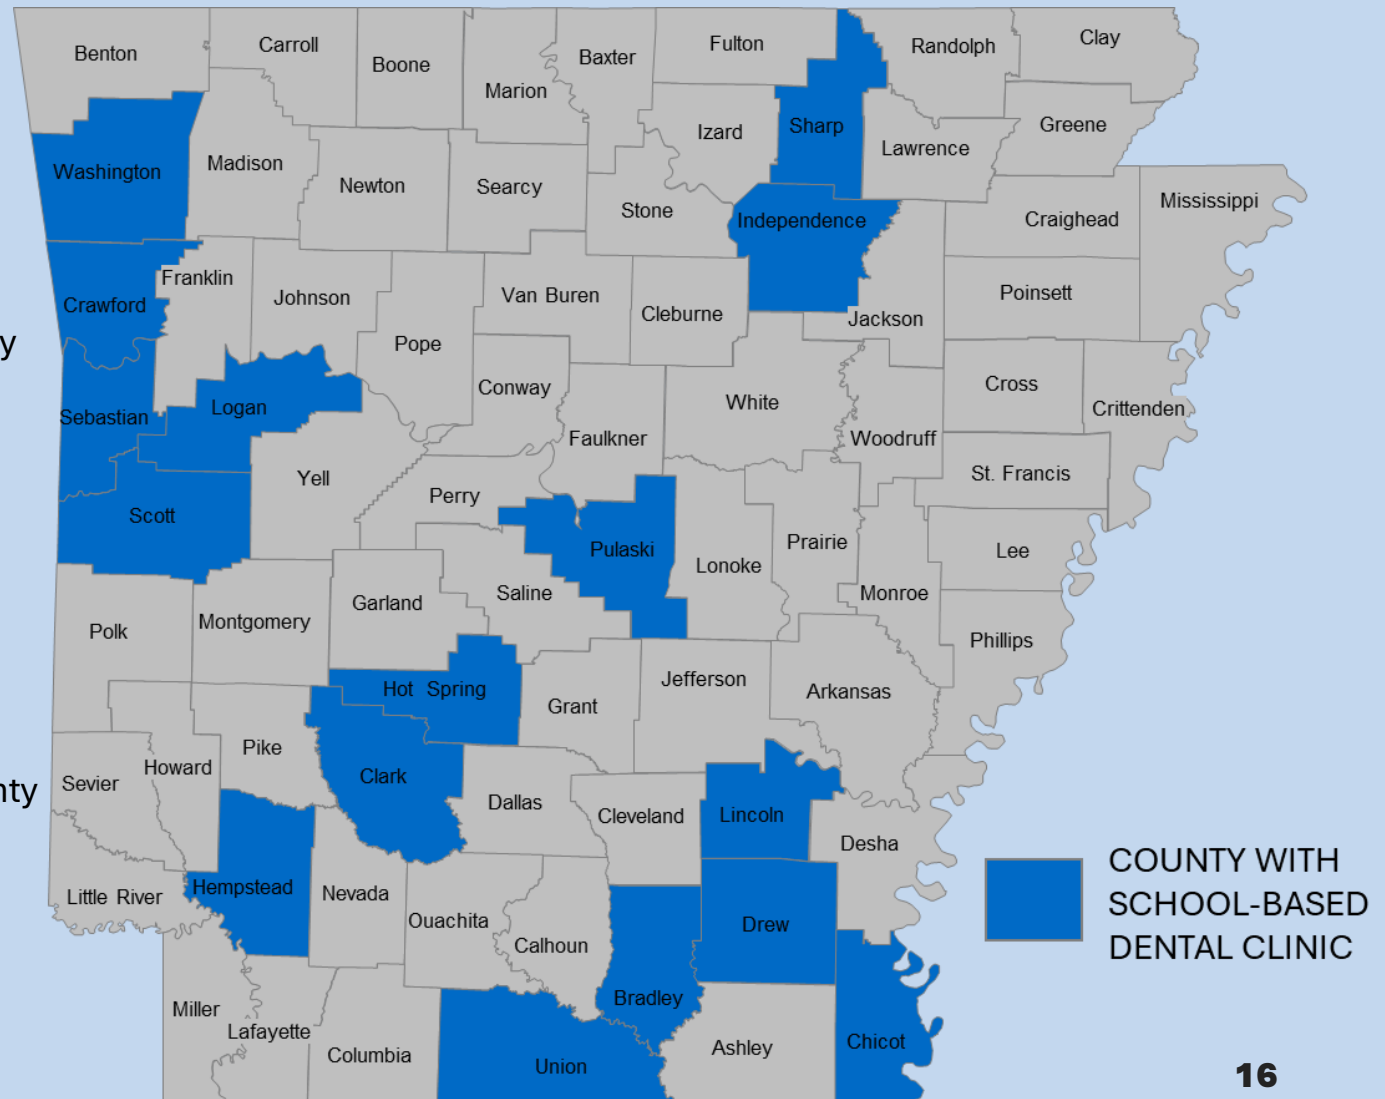

\*Methodological changes were made for 2016 sample size; caution is recommended in interpretation.

# SCHOOL-BASED DENTAL HEALTH CARE

## SCHOOL-BASED DENTAL CLINICS

School-based health care improves access by meeting children where they are—on school campuses. Nineteen (19) Arkansas school districts currently house on-campus dental clinics:

1. Booneville-Logan County
2. Cedarville-Crawford County
3. Dermott-Chicot County
4. Drew Central-Drew county
5. El Dorado-Union County
6. Eudora-Chicot County
7. Fayetteville-Washington County
8. Gurdon-Clark County
9. Highland-Sharp County
10. Hope-Hempstead County
11. Lakeside-Chicot County
12. Lavaca-Sebastian County
13. Little Rock-Pulaski County
14. Magazine-Logan County
15. Malvern-Hot Spring County
16. Mansfield-Scott County
17. Southside-Independence County
18. Star City-Lincoln County
19. Warren-Bradley County

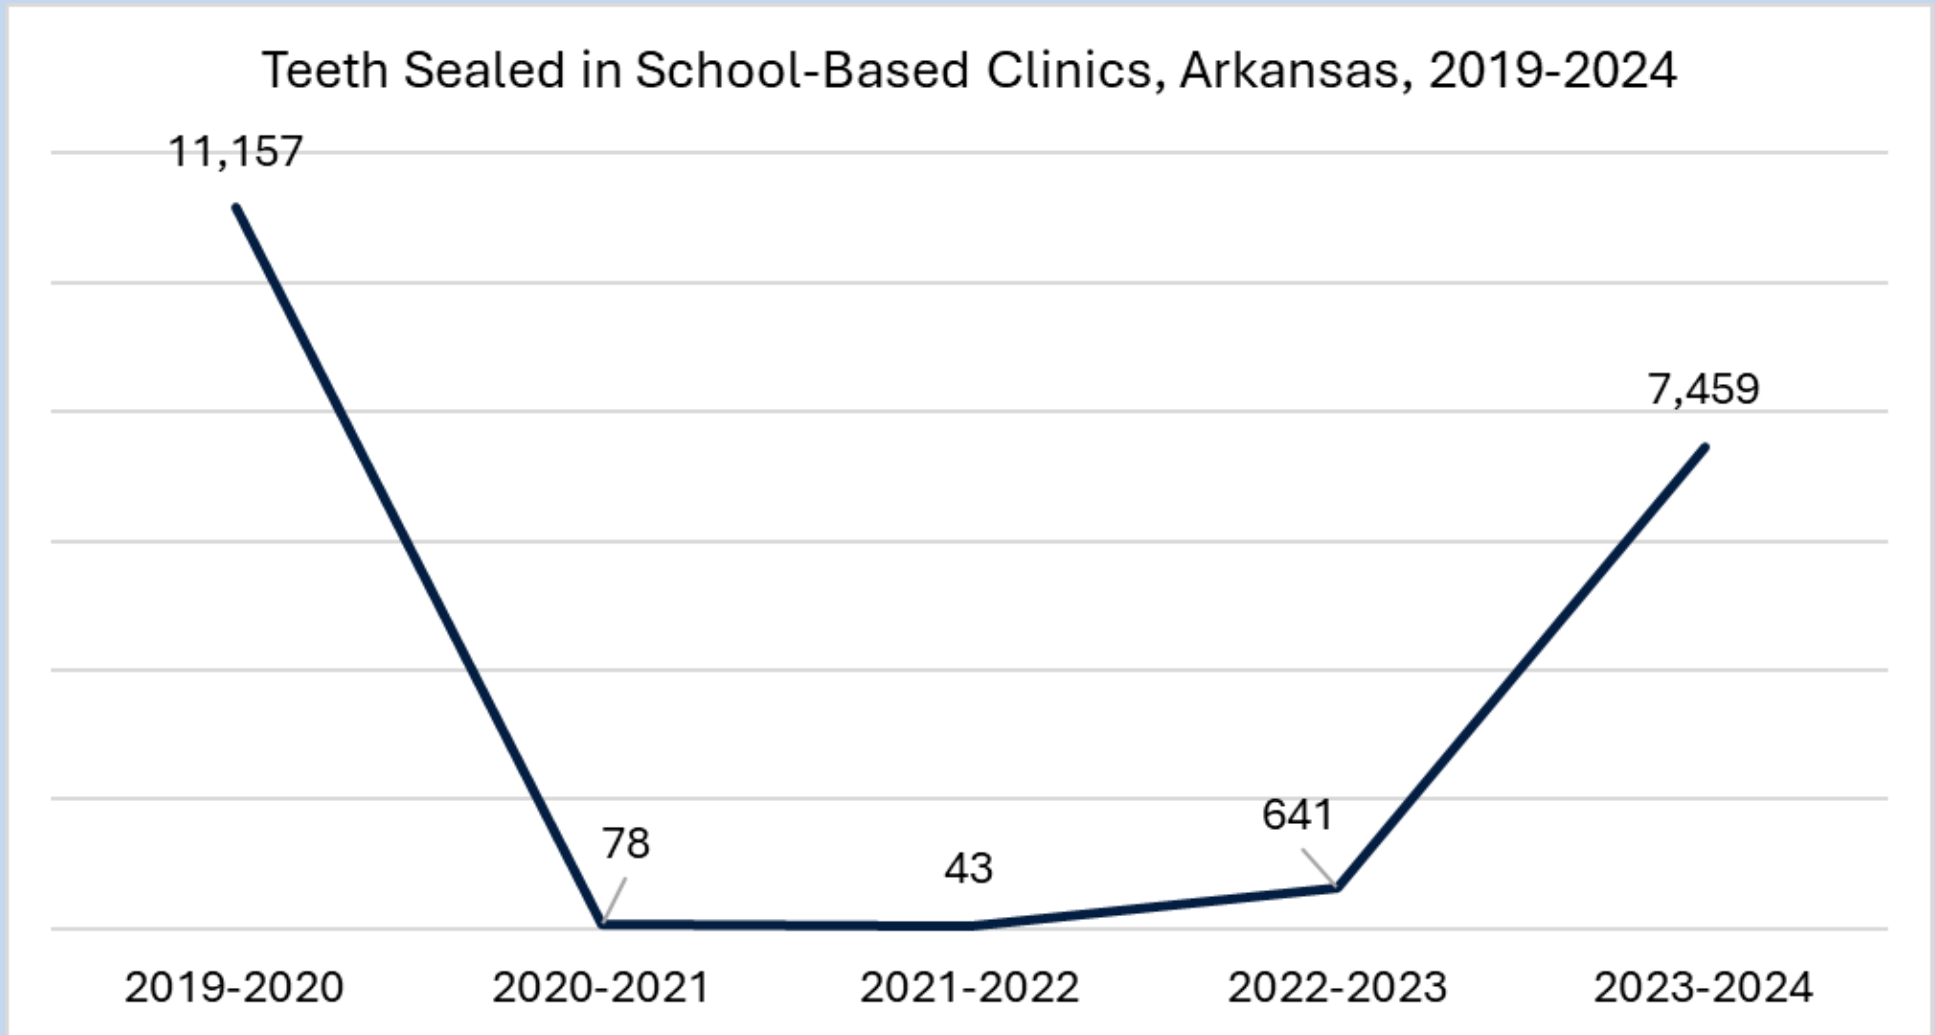

# **SCHOOL-BASED DENTAL HEALTH CARE**

## **SCHOOL-BASED SEALANT CLINICS**

Dental sealants are thin, resin coatings placed on the molars of children and are designed to protect the chewing surfaces from tooth decay.

**SOURCE: ADH OFFICE OF ORAL HEALTH INTERNAL DATA**

# ORAL HEALTH AT THE LOCAL HEALTH UNIT

## PAINT-A-SMILE PROGRAM

Children aged 18 and younger can receive a fluoride varnish at any local health unit across the state. Fluoride varnish is applied to the teeth in a thin layer that helps protect tooth enamel from decay.

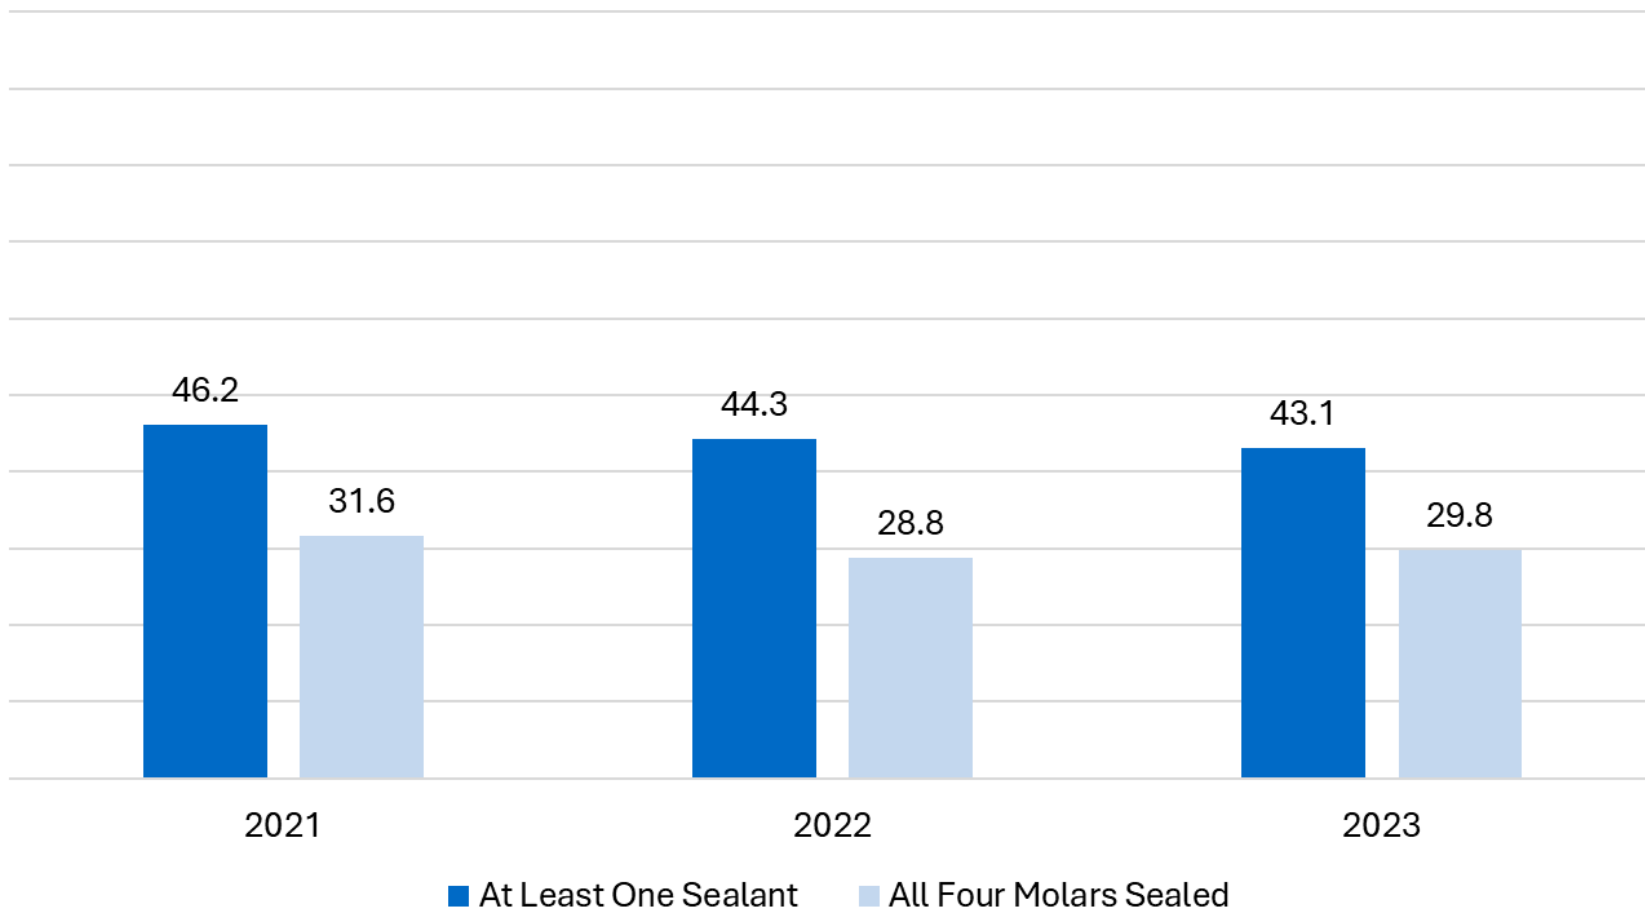

Number of Children Receiving Fluoride Varnish at a Local Health Unit, Arkansas, 2017-2023

# CHILD CORE SET MEASURES FOR MEDICAID & CHIP SEALANTS

Sealants are most effective when applied as soon as permanent molars come in. First molars typically come in around age 6; second molars come in around age 12.

Percentage of Enrolled Arkansas Children who have ever Received Sealants on Permanent First Molar Teeth by their 10th Birthdate, as Submitted by States for Child Core Set Report

# **PREGNANCY RISK ASSESSMENT MONITORING SYSTEM**

## **IMPORTANCE OF ORAL CARE & ACCESS**

Percent of Females who Knew it was Important to Take Care of Their Teeth and Gums During Their Most Recent Pregnancy, Arkansas, 2017 – 2020

Percent of Females who had Insurance to Cover Dental Care during Their Most Recent Pregnancy, Arkansas, 2017-2020

Changes that naturally occur during pregnancy put women at higher risk for oral disease. These data indicate that many Arkansas women understand the importance of caring for their teeth during pregnancy. Most Arkansas women also have dental insurance to cover the cost of dental visits during pregnancy.

# **PREGNANCY RISK ASSESSMENT MONITORING SYSTEM**

## **DENTAL VISITS BEFORE & DURING PREGNANCY**

Percent of Females who had a Dental Cleaning/Care  
Within the Past Year Before Their Most Recent Pregnancy,  
Arkansas, 2017 – 2020

Percent of Females who had Teeth Cleaned by a Dentist or  
Dental Hygienist during Their Most Recent Pregnancy,  
Arkansas, 2017-2020

Although many women understand the importance of dental care during pregnancy and have dental insurance to help cover the cost of care, less than half of women had their teeth cleaned during their most recent pregnancy. These data indicate there are other barriers to care during pregnancy that may exist. Dental treatment is safe and recommended during pregnancy.

# **PREGNANCY RISK ASSESSMENT MONITORING SYSTEM**

## **DENTAL CARE NEED VS. UTILIZATION**

Dental care during pregnancy is safe and recommended by the American College of Obstetricians and Gynecologists.

Percent of Dental Care Need vs. Utilization During Most Recent Pregnancy, Arkansas, 2017-2020

# **PREGNANCY RISK ASSESSMENT MONITORING SYSTEM**

## **ORAL HEALTH CONVERSATIONS IN THE MEDICAL SETTING**

Percent of Females that had a Doctor, Nurse or Other Health Care Worker Talk to Them About Dental Care Before Pregnancy, Arkansas, 2017 – 2020

Untreated oral disease, such as periodontitis (gum disease), has been associated with poor pregnancy outcomes, including preterm birth and low birth weight.<sup>4</sup> A conversation about the importance of oral health with a medical provider can support healthy oral health habits for pregnant women.

Percent of Females who had a Dental Care or Other Health Care Worker Talk to Them About How to Care for Their Teeth and Gums during Their Most Recent Pregnancy, Arkansas, 2017-2020

# ARKANSAS CANCER REGISTRY QUERY SYSTEM

## INCIDENCE BY GENDER

Oral Cavity and Pharynx Cancer Incidence Age-Adjusted Rate  
by Gender, Arkansas, 2014-2019

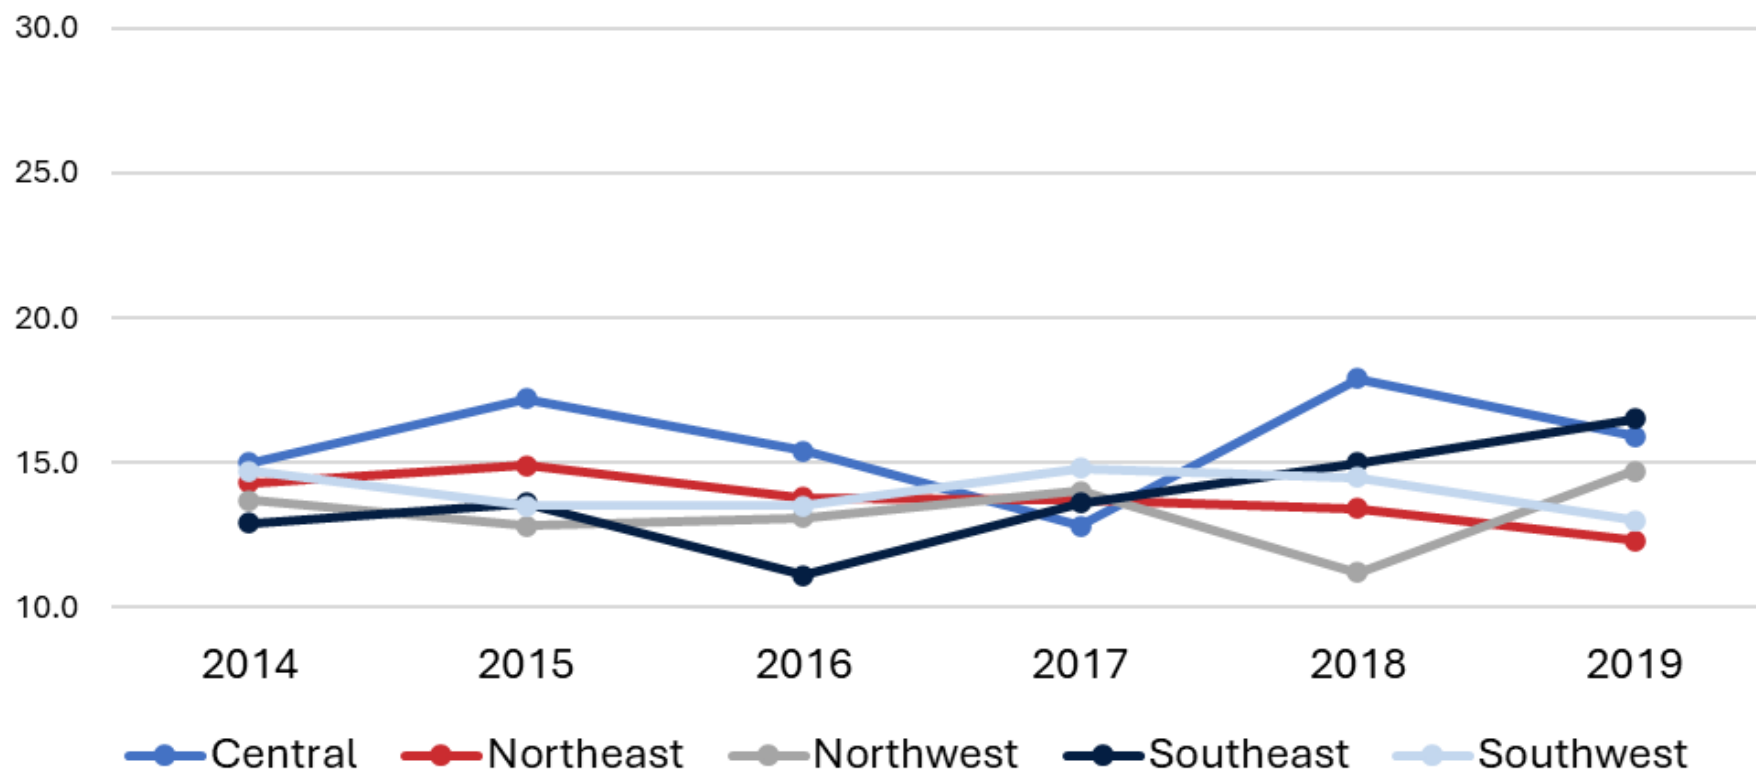

Rates are age-adjusted to the 2000 U.S. Standard Population. All rates are per 100,000 population; All Cancer Incidence as the data source.

# ARKANSAS CANCER REGISTRY QUERY SYSTEM

## INCIDENCE BY PUBLIC HEALTH REGION

Oral Cavity and Pharynx Cancer Incidence Age-Adjusted Rate  
by Public Health Regions, Arkansas, 2014-2019

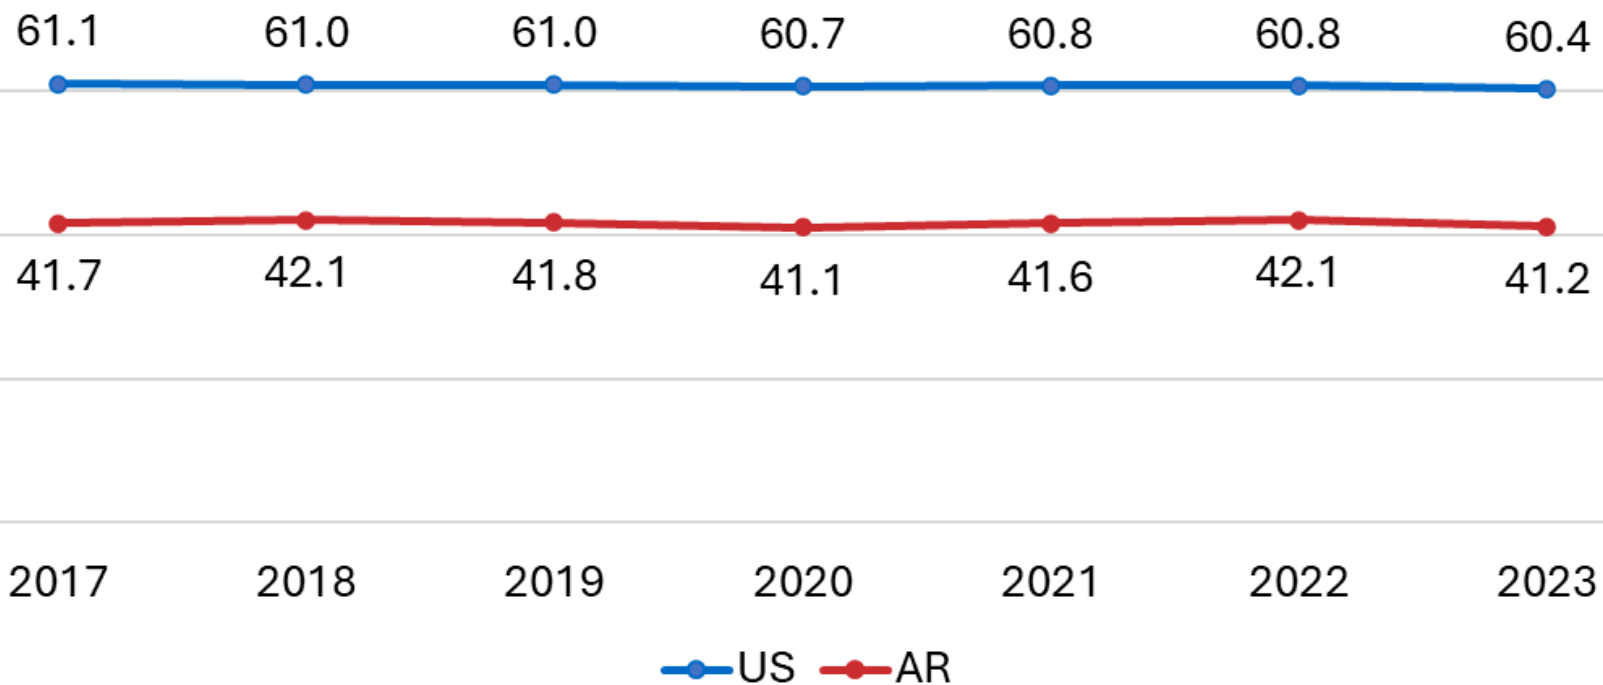

Rates are age-adjusted to the 2000 U.S. Standard Population. All rates are per 100,000 population; All Cancer Incidence as the data source.

# ORAL HEALTH PROFESSIONALS IN ARKANSAS

## DENTIST WORKFORCE

Rate of Dentists per 100,000 Population, United States and Arkansas, 2017-2023

# ORAL HEALTH PROFESSIONALS IN ARKANSAS

## TOTAL COUNT OF DENTAL PROVIDERS

Total Number of Dental Health Providers (Dentists, Dental Hygienists, and Dental Assistants) as Reported by ASBDE Licensures and Permits, Arkansas, 2017-2022

# ORAL HEALTH PROFESSIONALS IN ARKANSAS BY PROFESSION

Number of Dental Health Providers by Profession as Reported by  
ASBDE Licensures and Permits, Arkansas, 2017-2022

# ORAL HEALTH PROFESSIONALS IN ARKANSAS BY GEOGRAPHIC REGION

Number of ASBDE Licensed Dental Hygienists by Public Health Region, Arkansas, 2020-2022

Number of ASBDE Licensed Dentists by Public Health Region, Arkansas, 2020-2022

Number of Dental Assistants with ASBDE Permit by Public Health Region, Arkansas, 2020-2022

# ORAL HEALTH PROFESSIONALS IN ARKANSAS POPULATION TO DENTIST RATIO IN 2022

These are estimates of person to dentist ratio by public health region.

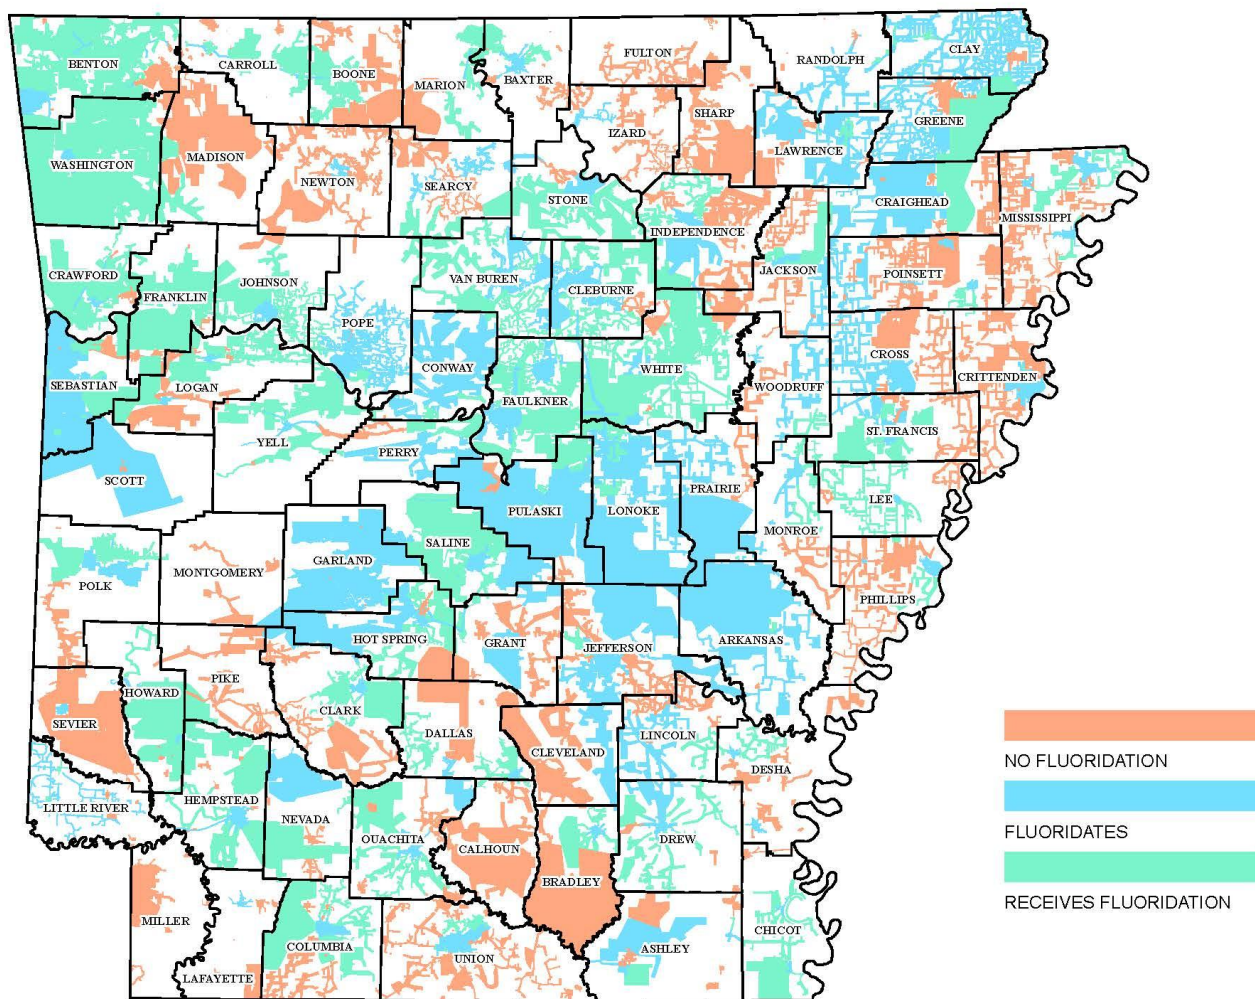

# COMMUNITY WATER FLUORIDATION

## ACCESS THROUGHOUT THE STATE

About 86% of the state population is served by water systems with fluoridated water, which helps prevent tooth decay. Water systems are monitored monthly for optimum fluoride levels, defined as 0.7 milligrams per liter of water.

Fluoridated Public Water Systems  
Arkansas, 2024
